

Linear drives DGC

FESTO

Key features

At a glance

- Compact – installation length relative to stroke
- Loads and devices can be directly mounted on the slide.
- There is a choice of three types of cushioning:
 - Elastic cushioning
 - Pneumatic cushioning
 - Hydraulic cushioning
- All settings accessible from one side:
 - Precision end-position adjustment
 - Position of proximity switches
 - Mounting of drive
 - Regulating speed
 - Pneumatic end-position cushioning
- Optional: NSF-H1 lubricant for the food zone

The linear drive is of limited suitability for the food zone.

More information:

www.festo.com/sp

→ Certificates

Not approved for use in the food zone:

- DGC...-GP (protected version)
- DGC... with integrated shock absorbers

- Sealing system

Cover strip

Sealing band

Advantages of the sealing system

- Long strokes with no restrictions
- Virtually no leakage

Guide variants

Compact design DGC-K

- Piston $\varnothing$ 18 ... 80 mm
- Stroke lengths from 1 ... 8500 mm
- 30% narrower than the DGC-G
- Low moving dead weight
- Symmetrical design

Basic design DGC-G

- Piston $\varnothing$ 8 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0.2 mm
- For small loads
- Operating behaviour under torque load = average

Plain-bearing guide DGC-GF

- Piston $\varnothing$ 18 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0.05 mm
- For small and medium loads
- Operating behaviour under torque load = average

Recirculating ball bearing guide DGC-KF

- Piston $\varnothing$ 8 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0 mm
- For medium and large loads
- Precise mounting interface with centring holes
- Operating behaviour under torque load = very good

Heavy-duty guide DGC-HD

- Piston $\varnothing$ 18, 25, 40 mm
- Stroke lengths from 10 ... 5000 mm
- Guide backlash = 0 mm
- For large loads
- Operating behaviour under torque load = very good

Guide axis DGC-FA

- Without drive
- Piston $\varnothing$ 8 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0 mm
- Precision guide, suitable for the DGC-KF. Can be used as machine component or as a twin guide with the DGC-KF

Key features

Versatility

Supply ports

- Optionally on 2 sides (at the front or on the side)
- For DGC-G/DGC-GF/DGC-KF

DL – Compressed air connection on the left or on both sides

The linear drive is actuated on the right only or at both ends as standard. The linear drive can be actuated on the left or at both ends by specifying the order code DL in the modular product system.

- For piston Ø 18, 25, 32, 40, 50, 63 mm
- For DGC-G, DGC-GF, DGC-KF

G/H/I/J – Proximity switch

- Proximity switches can be integrated, which means there is no projection. The cable can be guided through the slot behind the second switch
- For DGC-G/DGC-GF/DGC-KF

Precision end-position adjustment

- Between 0 ...25 mm per side
- For DGC-GF/DGC-KF/DGC-KFA

M – Profile mounting

- The profile mounting remains on the base plate after the drive is dismantled. This means faster assembly and removal without repeat adjustment
- For DGC-G/DGC-GF/DGC-KF/DGC-KFA

YWZ – Mechanical end-position limiter

- For variable stroke adjustment, e.g. for format adjustments
- The end stop can be mounted at any position along the stroke
- For DGC-GF/DGC-KF/DGC-KFA

Z1/Z2/Z3 – Intermediate-position module

- Enables variable intermediate positions
- The intermediate-position module can be mounted at any place along the stroke
- Precision repetition accuracy (0.02 mm) with high dynamic response
- For DGC-KF

FK – Moment compensator

- Compensates for inaccuracies during mounting of the linear drive and external guide
- Max. offset 2.5 mm
- For DGC-G

Key features

Options

C – Central lubrication

The lubrication adapters enable the guide of the linear drive DGC-KF to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

The adapters are suitable for oils and greases.

- For piston Ø 25, 32, 40, 63 mm
- For DGC-KF
- Connections:
 - On both sides of the slide
 - In three places (front, top, rear) on each side

Technical data → page 48

1H-PN – Clamping unit

- Single-channel design, for holding loads
- Reliable holding is guaranteed since the forces act directly on the slide
- A limited number of emergency braking operations are permissible with sizes 40 and 50

- For piston Ø 25, 32, 40, 50 mm
- For DGC-KF

Technical data → page 45

Datasheet

Load values

The indicated forces and torques refer to the centre of the slide surface.
These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

Note
To prevent the guide of the basic guide DGC-G from self-locking when used vertically and with a high torque load, the variant with recirculating ball bearing guide DGC-KF is recommended → page 40.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max.}}} + \frac{F_z}{F_{z_{max.}}} + \frac{M_x}{M_{x_{max.}}} + \frac{M_y}{M_{y_{max.}}} + \frac{M_z}{M_{z_{max.}}} \leq 1$$

Permissible forces and torques		Piston Ø							
		8	12	18	25	32	40	50	63
F _{y_{max.}}	[N]	150	300	70	180	250	370	480	650
F _{z_{max.}}	[N]	150	300	340	540	800	1100	1600	2000
M _{x_{max.}}	[Nm]	0.5	1.3	1.9	4	9	12	20	26
M _{y_{max.}}	[Nm]	2	5	12	20	40	60	150	150
M _{z_{max.}}	[Nm]	2	5	4	5	12	25	37	48

Influence of ferritic materials on proximity switches

Ferritic materials (steel parts or sheet metal) in the immediate vicinity of the proximity switches can cause sensing malfunctions. The following safety distances must be observed.

Piston Ø		8	12	18	25	32	40	50	63
Distance L1	[1] [mm]	0	0	0	0	0	0	0	0
	[2] [mm]	–	–	0	0	0	0	0	0
Distance L2	[1] [mm]	20	10	10	10	0	0	0	0
	[2] [mm]	–	–	25	25	25	25	25	25
Distance L3	[1] [mm]	30	25	25	25	25	25	25	25
	[2] [mm]	–	–	10	10	0	0	0	0
Distance L4	[1] [mm]	0	0	0	0	0	0	0	0
	[2] [mm]	–	–	0	0	0	0	0	0

Datasheet

Maximum permissible piston speed v as a function of payload m and distance $r_{\max}$ from the centre of mass

Piston Ø 8/12 with elastic cushioning P

Piston Ø 18 ... 63 with cushioning PPV

Piston Ø 8/12 with cushioning YSR

Piston Ø 8/12 with cushioning YSRW

Note

These specifications represent the maximum values that can be achieved. In practice, these values can fluctuate dependent on the position of the payload and mounting position.

Operating range of the cushioning

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the moving mass must be cushioned using suitable equipment (external shock absorbers), preferably at the centre of mass.

Note

To avoid distortion in the slide, the bearing surfaces of the attachments must maintain a flatness of at least 0.03 mm.

Data for horizontal mounting position:

Piston Ø	8	12	18	25	32	40	50	63
Distance $r_{\max}$ [mm]	25	35	35	50	50	50	50	50

Datasheet

Number of profile mountings MUC as a function of weight force F and support spacing l

The drive may need to be supported to limit the deflection in the case of large strokes. The following graphs can be used to determine the maximum permissible support spacing as a function of the mounting position and the applied weight and normal forces.

Horizontal mounting position

Vertical mounting position

Example:

The drive DGC-25-1500 is subjected to a force of 300 N in a horizontal mounting position.

The drive has an overall length of:
 $l = \text{stroke length} + L1$
 (see dimensions)
 $= 1500 \text{ mm} + 200 \text{ mm}$
 $= 1700 \text{ mm}$

According to the graph, the max. support spacing for the drive DGC-25 with a force of 300 N is 1300 mm.

In this example, profile mountings are required as the max. support spacing (1300 mm) is smaller than the overall length of the drive (1700 mm).

Datasheet

Load values

The indicated forces and torques refer to the centre of the slide surface.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

 **Note**

To prevent the drive with plain-bearing guide DGC-GF from self-locking when used vertically and with a high torque load, the variant with recirculating ball bearing guide DGC-KF is recommended page 40.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max.}}} + \frac{F_z}{F_{z_{max.}}} + \frac{M_x}{M_{x_{max.}}} + \frac{M_y}{M_{y_{max.}}} + \frac{M_z}{M_{z_{max.}}} \leq 1$$

Permissible forces and torques based on a travel speed of 0.2 m/s							
Piston Ø		18	25	32	40	50	63
F _y _{max.}	[N]	440	640	900	1380	1500	2300
F _z _{max.}	[N]	540	1300	1800	2000	2870	4460
M _x _{max.}	[Nm]	3.4	8.5	15	28	54	96
M _y _{max.}	[Nm]	20	40	70	110	270	450
M _z _{max.}	[Nm]	8.5	20	33	54	103	187

Influence of ferritic materials on proximity switches

Ferritic materials (steel parts or sheet metal) in the immediate vicinity of the proximity switches can cause sensing malfunctions. The following safety distances must be observed.

The distance depends on the position of the proximity switch (see [1] and [2]).

Piston Ø		8	12	18	25	32	40	50	63
Distance L1	[1] [mm]	0	0	0	0	0	0	0	0
	[2] [mm]	–	–	0	0	0	0	0	0
Distance L2	[1] [mm]	20	10	10	10	0	0	0	0
	[2] [mm]	–	–	25	25	25	25	25	25
Distance L3	[1] [mm]	30	25	25	25	25	25	25	25
	[2] [mm]	–	–	10	10	0	0	0	0
Distance L4	[1] [mm]	0	0	0	0	0	0	0	0
	[2] [mm]	–	–	0	0	0	0	0	0

Datasheet

Maximum permissible piston speed v as a function of payload m and distance $r_{\max}$ from the centre of mass
With cushioning PPV

With cushioning YSR

With cushioning YSRW

- $\varnothing 18$
- $\varnothing 25$
- . - . $\varnothing 32$
- $\varnothing 40$
- $\varnothing 50$
- $\varnothing 63$

Note
These specifications represent the maximum values that can be achieved. In practice, these values can fluctuate dependent on the position of the payload and mounting position.

Operating range of the cushioning

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the moving mass must be cushioned using suitable equipment (external shock absorbers), preferably at the centre of mass.

Note
To avoid distortion in the slide, the bearing surfaces of the attachments must maintain a flatness of at least 0.03 mm.

Data for horizontal mounting position:

Piston $\varnothing$	8	12	18	25	32	40	50	63
Distance $r_{\max}$ [mm]	25	35	35	50	50	50	50	50

Datasheet

Number of profile mountings MUC as a function of weight force F and support spacing l

The drive may need to be supported to limit the deflection in the case of large strokes. The following graphs can be used to determine the maximum permissible support spacing as a function of the mounting position and the applied weight and normal forces.

Horizontal mounting position

Datasheet

Number of profile mountings MUC as a function of weight force F and support spacing l

The drive may need to be supported to limit the deflection in the case of large strokes. The following graphs can be used to determine the maximum permissible support spacing as a function of the mounting position and the applied weight and normal forces.

Vertical mounting position

--- Ø 18
..... Ø 25
- . - . Ø 32

----- Ø 40
- - - - - Ø 50
- . . - - Ø 63

Example:

The drive DGC-25-1500 is subjected to a force of 300 N in a horizontal mounting position.

The drive has an overall length of:

$$\begin{aligned} l &= \text{stroke length} + L1 \\ &= 1500 \text{ mm} + 200 \text{ mm} \\ &= 1700 \text{ mm} \end{aligned}$$

According to the graph, the max. support spacing for the drive DGC-25 with a force of 300 N is 1300 mm.

In this example, profile mountings are required as the max. support spacing (1300 mm) is smaller than the overall length of the drive (1700 mm).

Peripherals overview

Variants and accessories				
	Type/order code	For piston Ø	Description	→ Page/Internet
[1]	Linear drive DGC-KF	8 ... 63	Linear drive without accessories, recirculating ball bearing guide	42
[2]	Intermediate position Z1/Z2/Z3	25, 32, 40	Enables up to three intermediate positions	84
[3] [6]	Mechanical end-position limiter YWZ	18 ... 63	For variable end-position adjustment, e.g. for format adjustments	82
[4]	Centring pin/sleeve1) ZBS/ZBH	8 ... 63	For centring loads and attachments on the slide	86
	Centring pin/sleeve ZBS/ZBH	8 ... 63	For centring the drive without foot mountings (user-specific)	86
[5]	Clamping unit 1H-PN	25, 32, 40, 50	For holding loads	45
[7]	Shock absorber YSR	8 ... 63	Self-adjusting, hydraulic shock absorber with spring return and linear cushioning characteristics.	74
[8]	Shock absorber YSRW	8 ... 63	Self-adjusting hydraulic shock absorber with spring return and progressive cushioning characteristics	74
–	Distance sensor SOIA	8 ... 63	For monitoring the condition of the cushioning components	86
[9]	One-way flow control valve GRLA	8 ... 63	For regulating speed	87
[10]	Proximity switch G/H/I/J	8 ... 63	For sensing the slide position	87
[11]	Connecting cable V	8 ... 63	Via proximity switch	89
[12]	Slot cover L	18 ... 63	For protecting against contamination and securing the proximity switch cable	86
[13]	Profile mounting M	8 ... 63	Simple and precise mounting option via dovetail connection.	78
[14]	Slot nut B	25 ... 63	For mounting attachments	86
[15]	Foot mounting F	8 ... 63	For mounting on the end cap	76
–	Cushioning P	8, 12	Non-adjustable, elastic cushioning. Used only at low speeds.	74
–	Cushioning PPV	18 ... 63	Adjustable, pneumatic end-position cushioning. Used at medium speeds.	74

Influence of ferritic materials on proximity switches

Ferritic materials (steel parts or sheet metal) in the immediate vicinity of the proximity switches can cause sensing malfunctions. The following safety distances must be observed.

The distance depends on the position of the proximity switch (see [1] and [2]).

Piston ø			8	12	18	25	32	40	50	63
Distance L1	[1]	[mm]	0	0	0	0	0	0	0	0

	[2]	[mm]	–	–	0	0	0	0	0	0

Datasheet

Load values

The indicated forces and torques refer to the centre of the slide surface.
These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max.}}} + \frac{F_z}{F_{z_{max.}}} + \frac{M_x}{M_{x_{max.}}} + \frac{M_y}{M_{y_{max.}}} + \frac{M_z}{M_{z_{max.}}} \leq 1$$

Permissible forces and torques

Piston Ø		8	12	18	25	32	40	50	63
F _y _{max.}	[N]	300	650	1850	3050	3310	6890	6890	15200
F _z _{max.}	[N]	300	650	1850	3050	3310	6890	6890	15200
M _x _{max.}	[Nm]	1.7	3.5	16	36	54	144	144	529
M _y _{max.}	[Nm]	4.5	10	51	97	150	380	634	1157
M _z _{max.}	[Nm]	4.5	10	51	97	150	380	634	1157

Technical data – Clamping unit

Dimensions → page 70

Size		25	32	40	50

Ø 63

Note

These specifications represent the maximum values that can be achieved. In practice, these values can fluctuate dependent on the position of the payload and mounting position.

Operating range of the cushioning

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the moving mass must be cushioned using suitable equipment (shock absorbers, stops, etc.), preferably at the centre of mass.

Note

To avoid distortion in the slide, the bearing surfaces of the attachments must maintain a flatness of at least 0.03 mm.

Data for horizontal mounting position:

Piston Ø	8	12	18	25	32	40	50	63
Distance $r_{\max}$ [mm]	25	35	35	50	50	50	50	50

Datasheet

Number of profile mountings MUC as a function of weight force F and support spacing l

The drive may need to be supported to limit the deflection in the case of large strokes. The following graphs can be used to determine the maximum permissible support spacing as a function of the mounting position and the applied weight and normal forces.

Horizontal mounting position

Vertical mounting position

Example:

The drive DGC-25-1500 is subjected to a force of 300 N in a horizontal mounting position.

The drive has an overall length of:
 $l = \text{stroke length} + L1$
 (see dimensions)
 $= 1500 \text{ mm} + 200 \text{ mm}$
 $= 1700 \text{ mm}$

According to the graph, the max. support spacing for the drive DGC-25 with a force of 300 N is 1300 mm.

In this example, profile mountings are required as the max. support spacing (1300 mm) is smaller than the overall length of the drive (1700 mm).

Datasheet

Central lubrication

The lubrication adapters enable the guide of the linear drive DGC-KF to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

- For piston $\varnothing$ 25, 32, 40, 63
- The modules are suitable for oils and greases.
- The dimensions of the linear drive DGC-KF are the same with and without central lubrication modules.
- Both lubrication adapters must be connected
- There are three connection options on each side
- Can be used in combination with:
 - Standard slide GK
 - Additional slide KL, KR
- Cannot be used in combination with:
 - Protected recirculating ball bearing guide GP

Slide dimensions

Order code C in the modular product system → page 74

Connection options

In combination with shock absorbers in the end caps, only the rear or top connection can be used.

Only the connection on the front or top can be used in combination with shock absorber retainer DADP.

Connection option for customer designs

The drawing on the right shows the connection option on the top lubrication interface using a customer design.

Additional dimensions → page 64

Design of a central lubrication system

A central lubrication system requires various additional components. The illustration shows different options (using a hand pump, pneumatic container pump or electric container pump) required as a minimum for designing a central lubrication system. Festo does not sell these additional components; however, they can be obtained from the following companies:

- Lincoln
- Bielomatik
- SKF (Vogel)

Festo recommends these companies because they can supply all the necessary components.

[1] Hand pump

[2] Pneumatic container pump

[3] Electric container pump

[4] Manually operated container pump

[5] Nipple block

[6] Distributor block

[7] Tubing or piping

[8] Fittings

+ plus stroke length

- [1] Compressed air supply port options on 2 sides
- [2] Compressed air supply port options on 2 sides, for compressed air supply port at one end
- [3] Sensor slot for proximity switch
- [4] Mounting hole for foot mounting HPC
- [5] Drilled hole for centring pin/sleeve
- [6] Thread for end stop

- - **Note**

The linear drive is actuated on the right only or at both ends as standard. The linear drive can be actuated on the left or at both ends by specifying the order code DL in the modular product system.

Ordering data – Modular product system

Order code

KL/KR – With additional slide

GP – With protected recirculating ball bearing guide

Working stroke reduction when ordering an additional slide KL or KR

For a linear drive DGC with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides.

Where:

DGC-12-500-...

L = 20 mm

L17 = 65 mm

Ø [mm]	8	12	18	25	32	40	50	63
L17	52	65	99	118.5	145.7	195.4	256.8	280

The working stroke is reduced to
 $415 \text{ mm} = 500 \text{ mm} - 20 \text{ mm} - 65 \text{ mm}$

40	137.5	16	41	27	101.6	101.1	63	2.1	186	170	13.4	76.5

Minimum distance

Between end stop and intermediate position

for $\varnothing$ [mm]	L1
25	145.3
32	185.3
40	271.5

Between two intermediate positions

for $\varnothing$ [mm]	L2	L3	L4
25	105	100	2.5
32	105	100	2.5
40	175	170	2.5

Note

- Shock absorbers are not included in the scope of delivery. Existing shock absorbers can be removed from the end caps of the linear drive and installed in the shock absorber retainer.
- The linear drive and the intermediate-position module must under no circumstances be operated without shock absorbers.
- A shock absorber retainer DADP-DGC and a stop KYC are additionally required when using an intermediate-position module.

- The projection (dimension H4) must be observed when using the drive in combination with the intermediate-position module DADM-DGC. Mounting via foot mountings HP or profile mountings MUC is recommended in this case.
- The stop lever positions can be sensed using proximity switches SME/SMT-10 → page 87.
- After reaching the intermediate position, the slide cannot continue to travel directly in the same direction. After an intermediate stop, the slide must first move back so that the stop lever of the intermediate-position module can fold in. The intermediate position can then be travelled through.

Accessories

Precision adjustment L

Note

The intermediate-position module DADM-DGC can be used in both directions. A shock absorber retainer DADP-DGC and a stop KYC are additionally needed when using an intermediate-position module.

Mounting example

Note

The intermediate-position module DADM-DGC can be mounted at any place along the stroke.

Ordering data – Proximity switch for T-slot, NAMUR

Datasheets → Internet: sdbt

	Type of mounting	Switching out-put	Electrical connection	Cable length [m]	Part no.	Type
N/O						
	Inserted in the slot from above, flush with cylinder profile	NAMUR	Cable, 2-core	5	579071	SDBT-MS-20NL-ZN-E-5-LE-EX6
				10	579072	SDBT-MS-20NL-ZN-E-10-LE-EX6

Ordering data – Safety clip for ATEX zone

Datasheets → Internet: neau

	Description	For size	Part no.	Type
	- Protects "equipment that is not intrinsically safe" against simple disconnection, here the plug of the proximity switch SMT and connecting cable NEBA - ATEX category: gas: II 3G / dust: II 3D	Plug M8x1	548067	NEAU-M8-GD

Ordering data – Cable holder DADG

Datasheets → Internet: dadg

	Description	Part no.	Type	PU ¹⁾
Cable holder DADG				
	For fixing the connecting cables at an angle of 90°	8069000	DADG-HL-N8-P2	2

1) Packaging unit

Accessories

Connecting cables NEBA, straight, connection M8						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M8x1 A-coded to EN 61076-2-104	Open end	3	2.5 m	8078223	NEBA-M8G3-U-2.5-N-LE3
				5 m	8078224	NEBA-M8G3-U-5-N-LE3
Connecting cables NEBA, straight, M12 connection						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M12x1, A-coded to EN 61076-2-101	Open end	3	2.5 m	8078236	NEBA-M12G5-U-2.5-N-LE3
				5 m	8078237	NEBA-M12G5-U-5-N-LE3
Connecting cables NEBA, angled, M8 connection						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M8x1 A-coded to EN 61076-2-104	Open end	3	2.5 m	8078230	NEBA-M8W3-U-2.5-N-LE3
				5 m	8078231	NEBA-M8W3-U-5-N-LE3
Connecting cables NEBA, angled, M12 connection						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M12x1, A-coded to EN 61076-2-101	Open end	3	2.5 m	8078245	NEBA-M12W5-U-2.5-N-LE3
				5 m	8078246	NEBA-M12W5-U-5-N-LE3
